# HCBC Hackathon GitHub Workflow

## 📌 Overview

All teams are required to use GitHub to build and submit their projects. This ensures a consistent starting point, smooth judging, and fair participation.

Please follow the instructions below carefully.

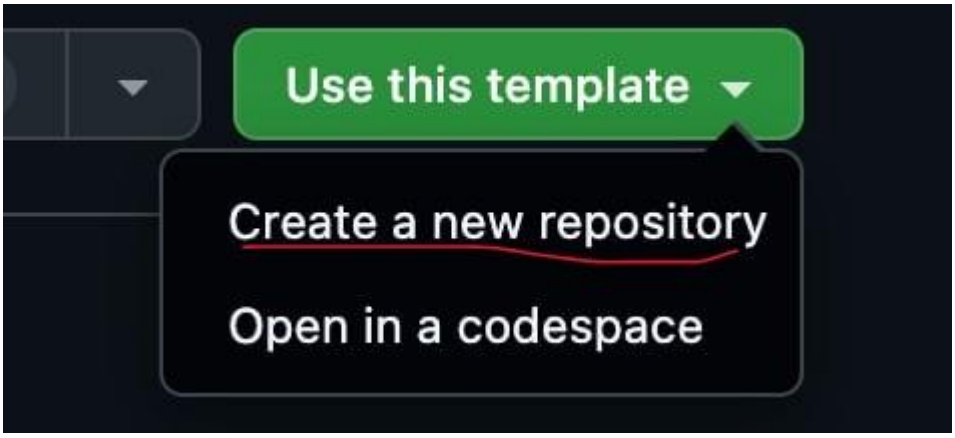
### 1. 👨‍💻 Getting Started (MANDATORY)

At the beginning of the hackathon, an **official starter repository link** will be shared.

#### Step-by-step:

a. Click the starter repository link
b. Click **"Use this template"**

c. Select **"Create a new repository"**



d. Name your repository using the format:
**HCBC-2026-TeamName-ProjectName**

**Example:**
**HCBC-2026-CodeMasters-AIHealthAssist**

## 2. 🗀 Starter Repository Requirement

All teams must begin from the official starter template.

Your repository will already include:

- `README.md`
- `START_HACKATHON.md`
- Basic folder structure

### Important Rules:

- ✅ Do NOT delete `START_HACKATHON.md`
- ✅ Fill in your **Team Name** and **Project Name**
- ❌ Do NOT replace the repository with pre-built code

👉 This ensures all teams start from the same base.

## 3. 🛠 Development Guidelines

**Developer should start with initial commit filling information in START_HACKATHON.md file and then start building from there.**

**During the hackathon:**

- Build your project inside your GitHub repository
- Commit your work regularly
- Use meaningful commit messages
  (e.g., “Added authentication”, “Integrated API”)

### Allowed:

- Open-source libraries
- APIs (with proper attribution)

### Not Allowed:

- Pre-built full projects
- Copying from other teams
